Chicks dig Pilots

Multiplex Fun Cub

by Stephen Green

Out of all the model aircraft I have flown this is my Number One go to model for fun. Ready to Fly or Kit it delivers an unbelievable flying experience. The parts fit in the kit version is stunning. Endless full power dives, vertical take offs and countless touch n goes, brilliant flaps, huge wheels, this incredibly durable structure can consistently take a vertical approach into a tennis court. Optional night Nav lights and floats the Fun Cub has it all.

It also makes fantastic trainer. Spend bit more, get so much more back, we fitted the Eagle Tree Guardian autopilot to make the perfect combo to teach yourself to fly.

If you are going it alone your first flight with the aeroplane will also be it's first flight. Standard Operating Procedure (SOP) in aviation flight training is to have a pre-flight briefing. Knowing what to expect before the wheels leave the ground speeds up the learning process. Pilot Notes picks up from where the instructions finish.

To keep it real any video footage tagged to a page is simple and un-edited. With handy tips to get you Into the Air and keep you there.
